
Site no.: Q35

Site name: Inchriach Terraces

Grid reference: [NH 89119 06233]

Locality: Bench features and associated channels on the mountainside south of Loch an Eilein.

GCR Status: N/A

GCR No.: N/A

Type: Natural landform assemblage

Description: A staircase of boulder-strewn benches and associated glacial meltwater channels, where higher channels truncate, or feed into, lower ones, indicating that they formed progressively as an ice margin retreated.

Justification: Good examples of kame terraces and related features formed at the retreating margin of the Spey outlet glacier during ice- sheet deglaciation.
