
Site no.: Q36

Site name: Edendon Recessional Moraines

Grid reference: [NN 71202 76323]

Locality: Edendon Water between Sronphadruig Lodge and Leac nan Cliabhan

GCR Status: N/A

GCR No.: N/A

Type: Landform assemblage

Description: A suite of sharp-crested, arcuate, recessional moraine ridges and parallel, glacial drainage channels

Justification: These features record the northward retreat of an active outlet glacier of the last ice cap. They have a bearing on research modelling and dating the last ice cap to cover the Gaick Plateau, probably during the Loch Lomond Stadial
